

# HEALTHCARE WASTE

Healthcare waste is a waste stream that many people never have to think about. It is a very specific stream that, well managed, may seem almost invisible, but badly managed can cause serious harm. It is generated at all stages of life, from birth to death, from rich nations, from poor. It may have potentially devastating consequences when poorly managed and cause harm to

This session will bring together speakers from across the world. Dr Sri Irianti will discuss options for healthcare waste in Indonesia based on wide ranging research, while Dr Christoph Hamelmann will take a different view and look at healthcare waste management in the context of the global health initiative. Professor Günay Kocasoy will be exploring options for sustainable healthcare waste management, a subject that is of relevance to all nations regardless of economic status.

Anne Woolridge will be reviewing some of the work carried out by the ISWA
